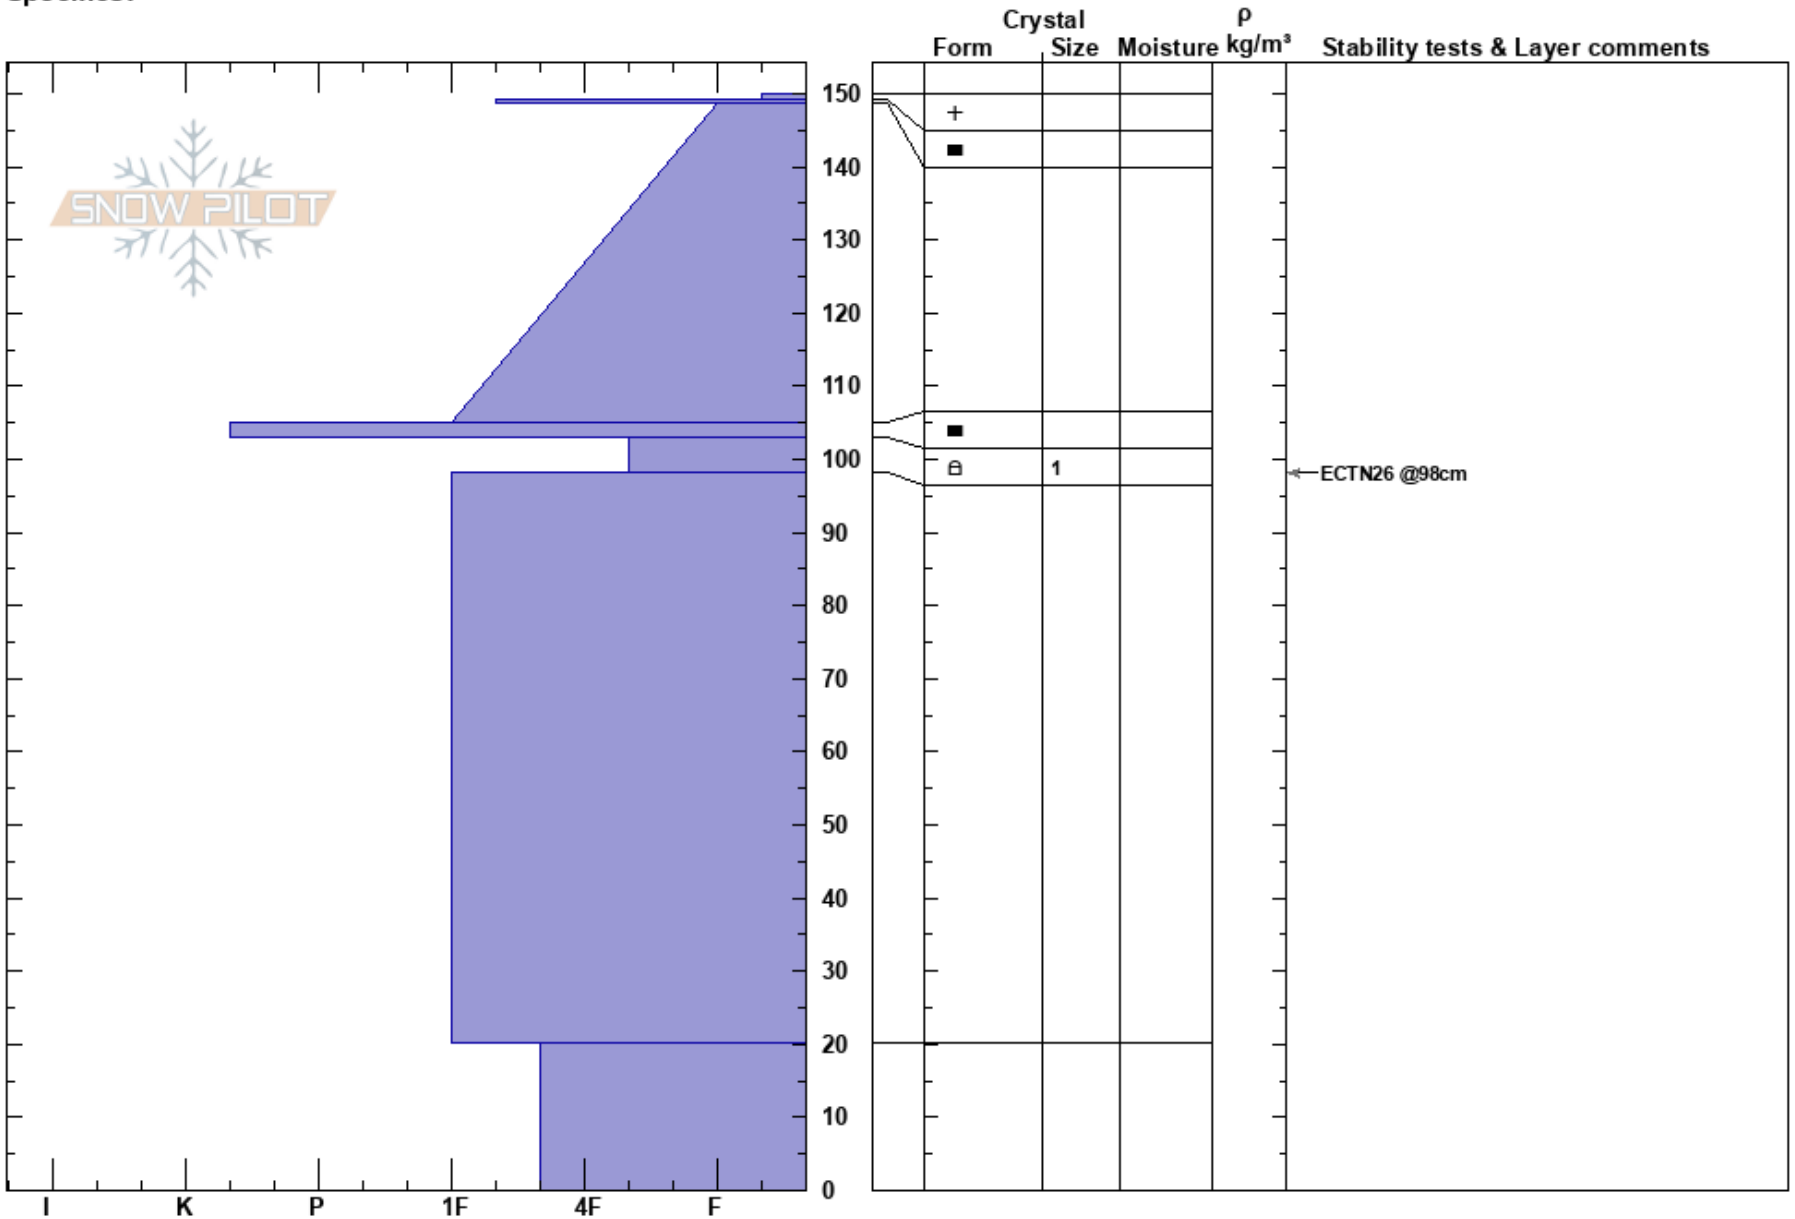
HS: 150

Layer Notes:
103-98cm: Problematic layer



Notes: Similar profile at two other locations at 7500 feet East (HS 115) and 8143 feet NE (HS 130). The NE location had some rounding fx's at ground. Not major concern but there. Consistent ECTN at fx's under ice crust at 103cm. PST's on this layer were about 75/100 end.
