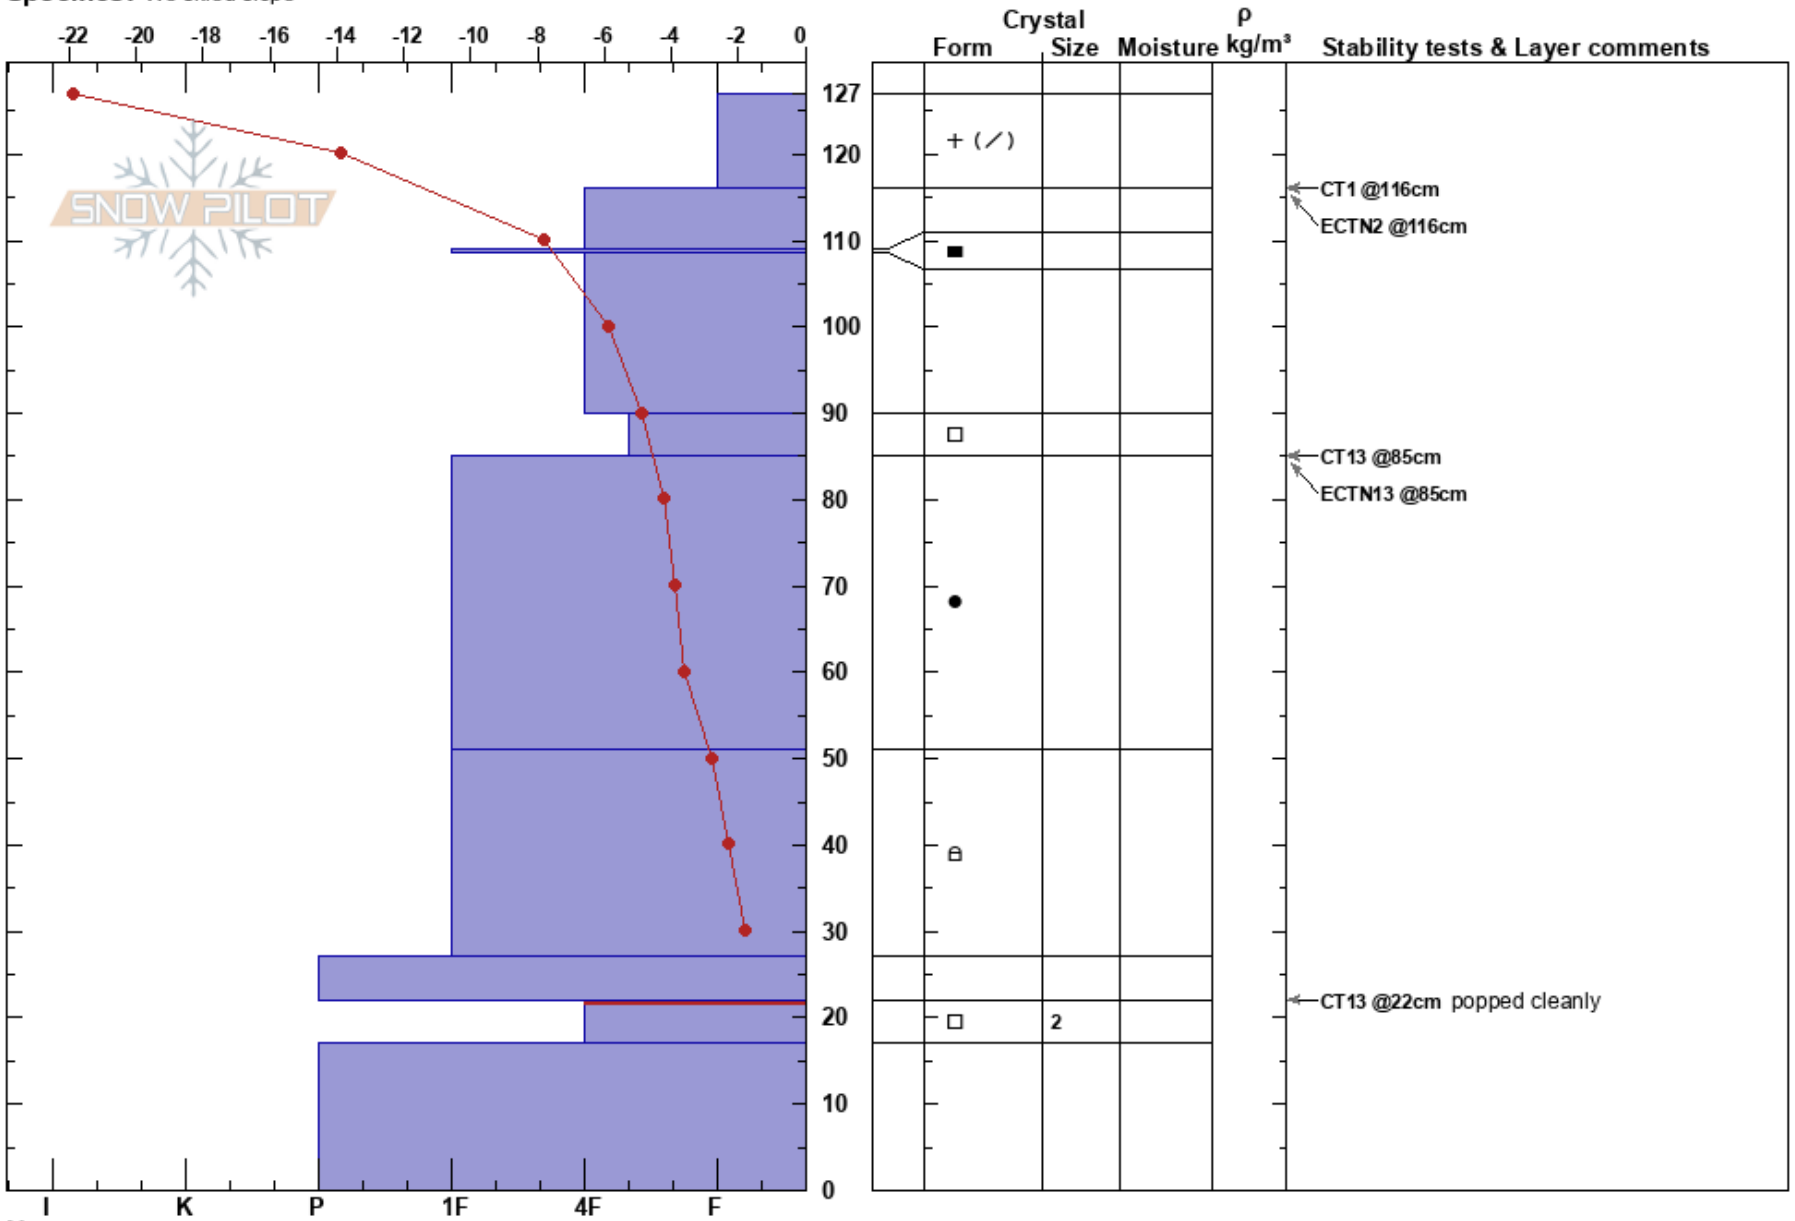
Slope Angle: 34°
Wind Loading:

Stability: Good
Air Temperature:
Sky Cover:
Precipitation:
Wind:

HS: 127

Layer Notes:
22-17cm: Problematic layer



Notes: The CT result at 22 cm was surprising. An ECT would not break at 22 cm until we hit the shovel several times with a drop kick. South of Provo Canyon and/or at higher elevations, the layer of facets at the ground is thicker. Very low density snow on surface would sluff very easy.
