HS: 109
 Layer Notes:
 109-108.9cm: laying flat
 37-35cm: Problematic layer
 29-0cm: mix of crusts

Notes: NSF's at surface shouldn't be a problem unless high pressure continues. Facets at the ground have adjusted to the load of the slab on top. Obvious signs of instability are isolated. This area is covered in snowmobile and ski tracks and no avalanches. Unsure if some slopes avalanched during storms at T-giving and first part of Dec.
