**Co-ord:** 40.91399N, -111.78478W  
**Slope Angle:** 31°  
**Wind Loading:** no

**Stability:** Poor  
**Air Temperature:**  
**Sky Cover:** X  
**Precipitation:** S-1  
**Wind:** Calm

**HS:** 235  
**Layer Notes:**  
 148-147.5cm: very slight crust as well  
 148-147.5cm: Problematic layer

**Notes:** Upper layers of snowpack were upside down and very obvious on foot and on sleds. The small facets were found in another pit on similar aspect and elevation and produced ECTP25. There seems to be a slight crust under them and this layer is an obvious stripe in the snowpit wall. It looked like there were a few surface hoar crystals as well but these were very hard to find.
