Co-ord:
Slope Angle: 34°
Wind Loading: yes

Stability: Fair
Air Temperature: -12°C
Sky Cover: OVC
Precipitation: S1
Wind: NW Moderate

HS:210
PF: 70
PS: 30
Layer Notes:
123-117cm: Problematic layer

Notes: Pit location was a little bit wind loaded but represents the widespread structure o NE aspects near treeline. Getting deep and stronger. Depth hoar sintering but still present.
Lots of new snow. Main layer of concern is the old snow interface now buried 70 to 90cm where wind has drifted snow.
