 Air Temperature: 3.9°C 259-252cm: Problematic layer
 Sky Cover: FEW
 Precipitation: NO
 Wind: NE Light Breeze

Notes: Dug on the opposite aspect of Icy Gulch entrance, near the top of Gastineau Peak. Another pit closer to the peak at 3500' found ECTX and CT smashing of wet layers. The other pit had 80cm of melt forms and crusts with rounds down lower. Another pit on the SW shoulder of Roberts Peak at 2800' was very similar, but even wetter. Probing at the last site felt a punchy to firm layer 275cm deep.
