

Carpenter Avalanche
Central Sierra
CA
Elevation: 8522 ft
Aspect: 352°
Specifics: Pit is adjacent to avalanche crown;

Andy Anderson
12/27/2020 - 11:00am
Co-ord: 39.41255N, -120.31169W
Slope Angle: 38°
Wind Loading:

Stability: Poor
Air Temperature:
Sky Cover:
Precipitation:
Wind:

HS:99
39-0cm: Problematic layer

Layer Notes:

Notes: Brandon triggered this avalanche remotely when he stepped off his skis while digging a pit on a low angle slope about 150 m away. He did an ECT at the trigger location before he stepped off his skis. It failed at the interface between the new and old snow (@ 67cm in this crown profile pit). ECTP 23. Coordinates: 39.41206, -120.31307
