Power Line meadows Eric Falconer Stability: Fair HS: 165 Layer Notes: San Juan Range 01/18/2017 - 3:20am Air Temperature: -4°C PS: 15 56-45cm: Problematic layer Co-ord: 37.89837N, -107.70260W Sky Cover: SCT

Elevation: 11300 ft Slope Angle: 21° Precipitation: NO Aspect: NW Wind Loading: no Specifics: Recent avalanche activity on different slopes; Ski tracks on slope; We skied slope

CO

Wind: Calm

Notes: This was a deep snow pit with the top half displaying many layers of weakness from the CT test, ranging from 25cm down to 150cm. However, the basal layer of the snowpack was hollow facet cups and were supprisingly not reactive with any of the stability tests. We found rounding facet particles mostly in the middle of the snowpack displaying some healing and re-bonding characteristics.
