Layer Notes:  
83-80cm: Problematic layer

**Notes:** Very layered snowpack with many different crusts. Natural avalanche, looked cornice triggered on different N/NE aspect near ridge line at ~ 10,000 ft. elevation. Snow pit layers of most concern are two Knife crusts near the surface (80 cm and 76 cm above ground respectively) and a buried layer of small facets 45-58 cm above the ground.
