Slope Angle: 21°
Wind Loading:

Stability:
Air Temperature: -7°C
Sky Cover: BKN
Precipitation: NO
Wind: Calm

HS: 175
PF: 50 30-0cm: Problematic layer
PS: 25

Notes: Stephens Glacier. Lower Shoulder of the Treatment Center. Lots of sluffing and very soft slab release during prior storm. A pocket may have released when skiing over a sharp convexity but the light was so flat that we couldn't see for sure. Generally favorable structure, but the bottom facets would be a concern in areas where it is thinner and has a thinner/weaker slab above it. This pit was ~ 150 meters off of the LZ in an area where the snowpack was likely stronger than mid slope.
