Powder House Andrew Pierce Stability: Air Temperature: -11°C PF: 35 36-37cm: Problematic layer 02/22/2022 - 2:26am Snoqualmie Pass WA

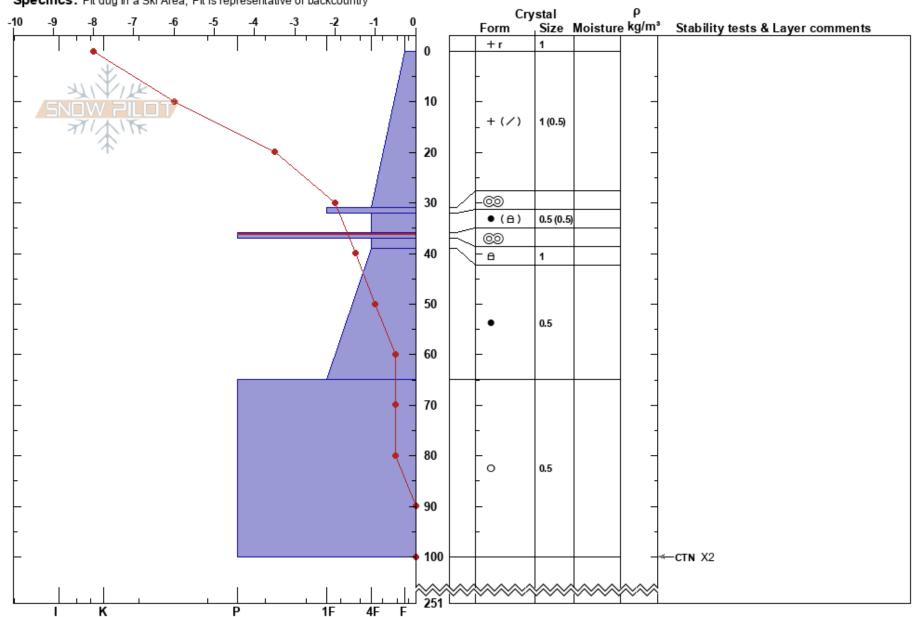

Co-ord: 47.43560N, -121.43342E Slope Angle: 21°

Elevation: 4399 ft Wind Loading: no Aspect: 240°

Sky Cover: OVC Precipitation: NO **HS**:251

Layer Notes:

Wind: SE Light Breeze Specifics: Pit dug in a Ski Area; Pit is representative of backcountry

Notes: Layer 32-36: Still some clearly faceted particles with long straight edges and sharp angulated corners, but the vast majority of grains were beginning to round or mostly rounded. These grains have likely been through a lot drastic of metamorphic swings from faceting to rounding and back again. Much less defined evidence of faceting than in previous pits dug on more northerly aspects.
