

Dark Canyon Laurel Pk
La Sal Mountains
UT

Mark Staples
02/26/2022 - 12:05pm
Co-ord: 38.45463N, -109.23102W
Slope Angle: 19°
Wind Loading:

Stability: Fair
Air Temperature:
Sky Cover:
Precipitation:
Wind:

HS: 148
Layer Notes:
110-107cm: dirty
107-105cm: intermittent in pit wall
105-95cm: Problematic layer

Elevation: 11102 ft
Aspect: 110°
Specifics: Collapsing, localized; Cracking

Notes: I was very surprised that the ECT did not break easier or propagate on the layer of old near surface facets at 105-95 cm. Signs on instability were not apparent above treeline. On shaded sheltered slopes below treeline we got widespread cracking.
