**Slope Angle:** 19°  
**Wind Loading:**

**Stability:** Fair  
**Air Temperature:**  
**Sky Cover:**  
**Precipitation:**  
**Wind:**

**HS:** 148  
**Layer Notes:**  
 110-107cm: dirty  
 107-105cm: intermittent in pit wall  
 105-95cm: Problematic layer

**Notes:** I was very surprised that the ECT did not break easier or propagate on the layer of old near surface facets at 105-95 cm. Signs on instability were not apparent above treeline. On shaded sheltered slopes below treeline we got widespread cracking.
