

Tiekel Trees
 Chugach Range
 AK
 Elevation: 2857 ft
 Aspect: 10°
 Specifics:

Gareth Brown
 02/28/2022 - 3:00pm
 Co-ord: 61.32904N, -145.34123W
 Slope Angle: 10°
 Wind Loading:

Stability: **Air Temperature:**
Sky Cover: BKN
Precipitation: S-1
 Wind: Calm

HS: 190
PF: 30
PS: 15
 89-88cm: 1/24 layer sintering
 40-0cm: Chains up to 1.5 cms NOV fc
 40-0cm: Problematic layer

Notes: Performed a version of a deep tap test on an ECT that is not standard. I removed snow in the column so that weak layer was 100 cms deep. The result of this test was the ECTP23 down 150 cms. Although not standard, I believe these results indicate the ability for deep slabs to be human triggered in areas where thinner snowpacks exist.
