Slope Angle: 31°  
Wind Loading: no

Stability:   
Air Temperature: 3°C  
Sky Cover: CLR  
Precipitation: NO  
Wind: Calm

HS:238  
PF: 35 86-97cm: Problematic layer

Notes: Quick obs pit targeting specific layers. Not a full profile.

\*Pronounced dust layer at 70-71cm down

\*86-97: bigger and more defined facets (rounding), results with non-standardized tests found on this layer (prying columns after CT and ECT). This is likely the layer most of the AMu triggered avalanches broke on recently in this forecast zone. Layer has 4 "lemons"
