Stability: HS:91
 Air Temperature:
 Sky Cover: FEW
 Precipitation:
 Wind: N Light Breeze

Layer Notes:
 67-66cm: Problematic layer

Specifics: Collapsing, localized; Recent avalanche activity on different slopes

Notes: Had one large collapse (50'+ diameter), just above snowpit location. Felt I could have remotely triggered a big avalanche with more ridge walking.

Very warm temps the past 2 days, with highs in the upper 40's F at 9000' Fisher Creek.
