 Slope Angle: 20°
 Wind Loading: no

Stability: Poor
 Air Temperature:
 Sky Cover: OVC
 Precipitation: S-1
 Wind: Calm
 HS: 115
 Layer Notes: 80-77cm: Problematic layer

Specifics: Recent avalanche activity on similar slopes; Ski tracks on slope; We skied slope

Notes: I dug two additional hasty pits to the upper crust interface with unremarkable ECTN results. I also ski cut shooting cracks and a small D1 avalanche on a test slope. I would say false stable results on that interface.
