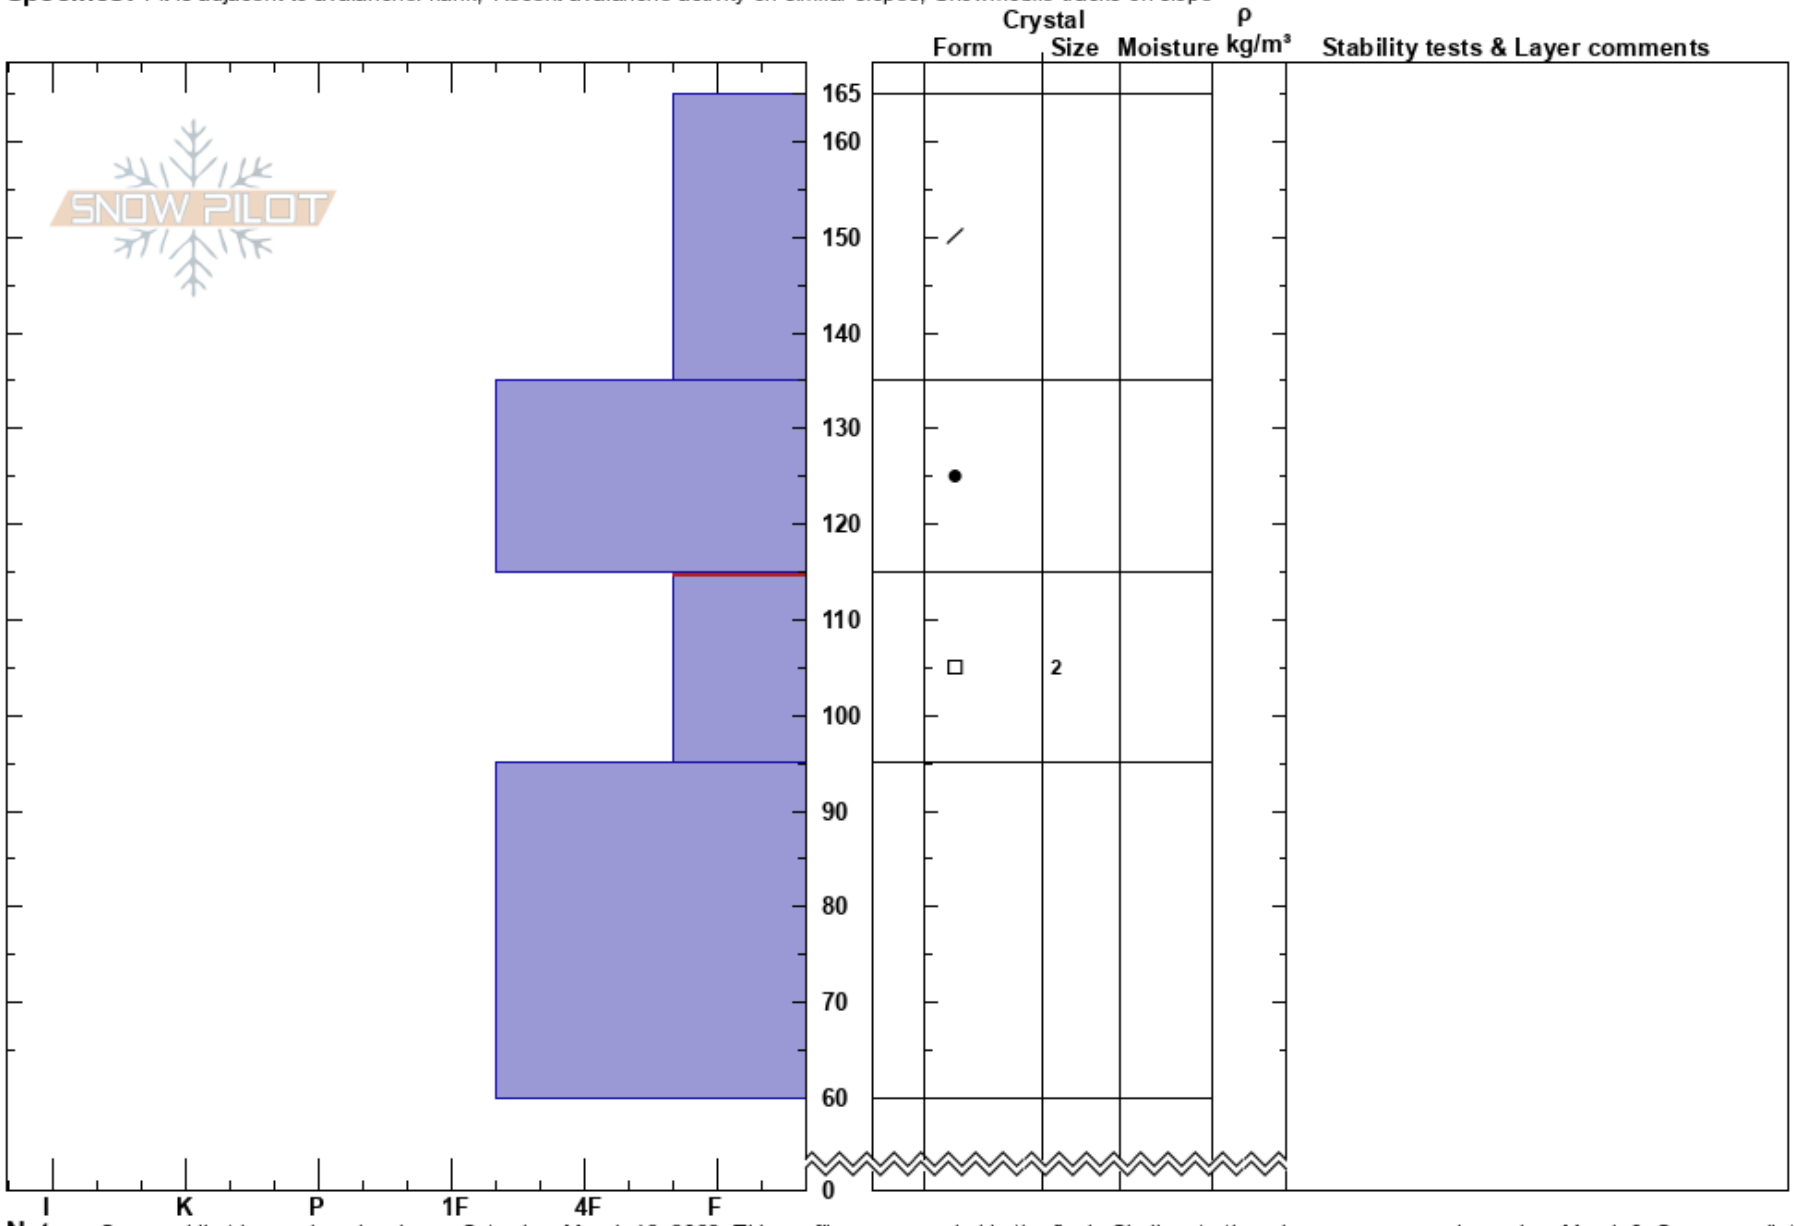
Co-ord: 40.87181N, -110.98577W
Slope Angle: 35°
Wind Loading:

Stability: Poor
Air Temperature:
Sky Cover:
Precipitation:
Wind:

HS: 165

Layer Notes:
115-95cm: Problematic layer

Specifics: Pit is adjacent to avalanche: flank; Recent avalanche activity on similar slopes; Snowmobile tracks on slope



Notes: Snowmobile triggered avalanche on Saturday, March 12, 2022. This profile was recorded in the flank. Similar stratigraphy was seen nearby and on March 8. See snowpilot pit from that date (https://snowpilot.org/node/41581). In nearby pits we got ECTP15 on the same PWL.
