HS:62
 Layer Notes:
 45-41cm: Problematic layer

Specifics: Recent avalanche activity on similar slopes; Recent avalanche activity on different slopes

Notes: We decided not to skin further, given the potential for propagation and recent activity on similar slopes in the alpine. Variable snow conditions observed all day on NE facing terrain: patchy/thin in spots, wind drifts that were stiff, hollow sounding, and produced cracks in others, and some areas of filled in cream cheese. Stayed below 30 degrees all day.
