Specifics: Cracking; Recent avalanche activity on similar slopes; We skied slope

**Notes:** 10m cracking coming up through the trees, seemed isolated to the location. Small amount of wind loading observed off a small ridge skiers right in the fan. 100m up there was a 48h+ avalanche sz.2 just below the choke of the couloir. 20m across, 60cm deep, ran 100m terminated mid track. North aspect. Skier triggered a small size 1 soft slab on noted wind loading on the descent. 10cm deep, 5 meters across, ran 10m.
