MiniRidge Test Profile gili keselman Stability: HS:60 Layer Notes: purcell 15/12/2022 - 12:50 Air Temperature: -11°C PF:60

Elevation: 2205 m Slope Angle: Precipitation: NO Aspect: Wind Loading: Wind: Calm

Specifics: Recent avalanche activity on similar slopes; Recent avalanche activity on different slopes

BC

Notes: Testing south facing slope (Azimuth 170, slope 22 degrees) for any instabilities or weak interfaces after recent avalanche activity around the resort in last few days with the aim to gain confidence in the snowpack and our forecasting. No surprises here: 15cm of storm snow (no slab properties) sitting on top of 2cm sun crust, below that it's facets to ground. No shear failure observed in Shovel Shear Test
