 Layer Notes:  
 0-2cm: RR crust  
 0-2cm: Problematic layer

**Notes:** Winds NNW gusting to moderate at the highest ridges. RR crust with .5mm NSF on any slope taking solar energy. Noted some dry loose avalanches from a cornice drop on E facing at 9900'. Isolated areas of wind drifted snow on steep leeward aspects was still suspect. Cloud deck moved through during the day. Hovered around 7000' for the afternoon.
