 Layer Notes:
 179-120cm: multiple layers included
 67-64cm: Problematic layer

Specifics: Recent avalanche activity on similar slopes; Recent avalanche activity on different slopes

Notes: Full depth pit on the shoulder of Arthur on a small slope above the LZ. Did not go on to the main face due to slippery firm rime freezing rain crust. Lots of deep slab natural activity seen on the flight. Mostly on north aspects. A few isolated crowns on west aspects.
