Layer Notes:
 140-138cm: mid storm inverted layer
 130-128cm: likely burried 20230123
 130-128cm: Problematic layer

Specifics: Collapsing, localized; Recent avalanche activity on different slopes; We skied slope

Notes: Experienced whoomf on slope prior to digging pit.

Noted a few buried SH crystals in 130-128 layer which leads me to believe this layer formed during the cold/dry 20230119-2020122 period.
