02/26/2023 - 10:50am  
Co-ord:  
Slope Angle: 36°  
Wind Loading: yes

Stability:  
Air Temperature: -6°C  
Sky Cover: X  
Precipitation: S-1  
Wind: SW Strong

HS:77  
PF: 30  
PS: 10  
0-0.25cm: Thin, 2-3 mm.  
0-0.25cm: Problematic layer  
0.25-17cm: New snow  
17-34cm: Some rounding  
54-65cm: Rounding

Elevation: 7900 ft  
Aspect: 90°

Specifics: Pit dug in a Ski Area

**Notes:** Very thin and fragile surface rime crust formed from rain mist event at beginning of precip. event this morning. This layer will potentially cause significant avalanche problems as this storm progresses over the next couple of days. Near surface small grain faceting has diminished somewhat from recent warm daytime temperatures.
