 Slope Angle: 25°
 Wind Loading:

Stability:
 Air Temperature:
 Sky Cover: CLR
 Precipitation: NO
 Wind: Calm
 PF: 40
 PS: 20 40-50cm: Problematic layer
 Layer Notes:

Notes: Numerous size 1 to 2 natural slides that went about 36 hours ago on one of our regular runs; almost all convex rolls at this elevation had slid; fracture line profile on one of the rolls. Suspected 2 to 4mm surface hoar from 5 days ago mixed with stellars. It appears the layer has tightened up significantly
