 Wind Loading: no

Stability: Good  
 Air Temperature: 140-138cm: dirty  
 Sky Cover: 138-134cm: Problematic layer  
 Precipitation:  
 Wind:

**Notes:** The thick and soft faceted layer under the thick crust really tells the story of how different things are this winter. Normally this location would be baked and riddled with crusts and not have such a layer of facets. With such a thick, strong crust on top of them, I don't think they are a concern
