Bowl 2 Willow Peak Rdg

Elevation: 9000 ft

Aspect: N

Spring Mountains 03/09/2023 - 10:30am NV

Co-ord: 36.38825N, -115.76997E

Slope Angle: 32°

Andrew Dickie

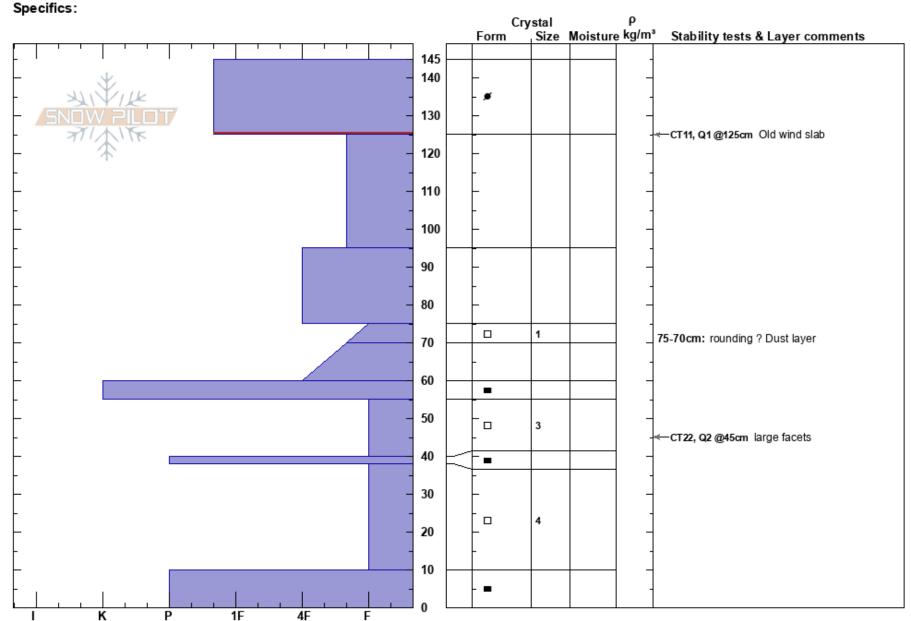

Wind Loading: previous

Stability: HS:145 Layer Notes: **PS**: 0

Air Temperature: 2°C

Sky Cover: CLR Precipitation: NO Wind: Calm

145-125cm: Problematic layer 75-70cm: rounding ? Dust layer

Notes: We ended up skiing a more ENE aspect off summit. Snowpack was shallower and no wind slab was present, same central large ice crust was present and even thicker on ENE aspect. 2/21 dust layer did not react on the skied aspect. Same failure on lower ice crust but seemed like it would be hard to trigger given several inch thick ice crust above the larger facets.
