Co-ord: 41.21924N, -111.86995W
Slope Angle: 36°
Wind Loading: yes

Stability: Fair
Air Temperature: -1.1°C
Sky Cover: CLR
Precipitation: NO
Wind: SW Light Breeze

Layer Notes:
180-165cm: broken stellars
180-165cm: Problematic layer
143-120cm: Percolation Columns
110-70cm: Percolation Columns

Notes: Wind-loading at the ridgetops, not at the pit location. Percolation water columns at 143 with rounded crystals surrounding them. Propagation on broken stellars at 165 from ground. If this was a steeper zone or had more wind-loading propagation might have occurred earlier and would be more of a concern.
