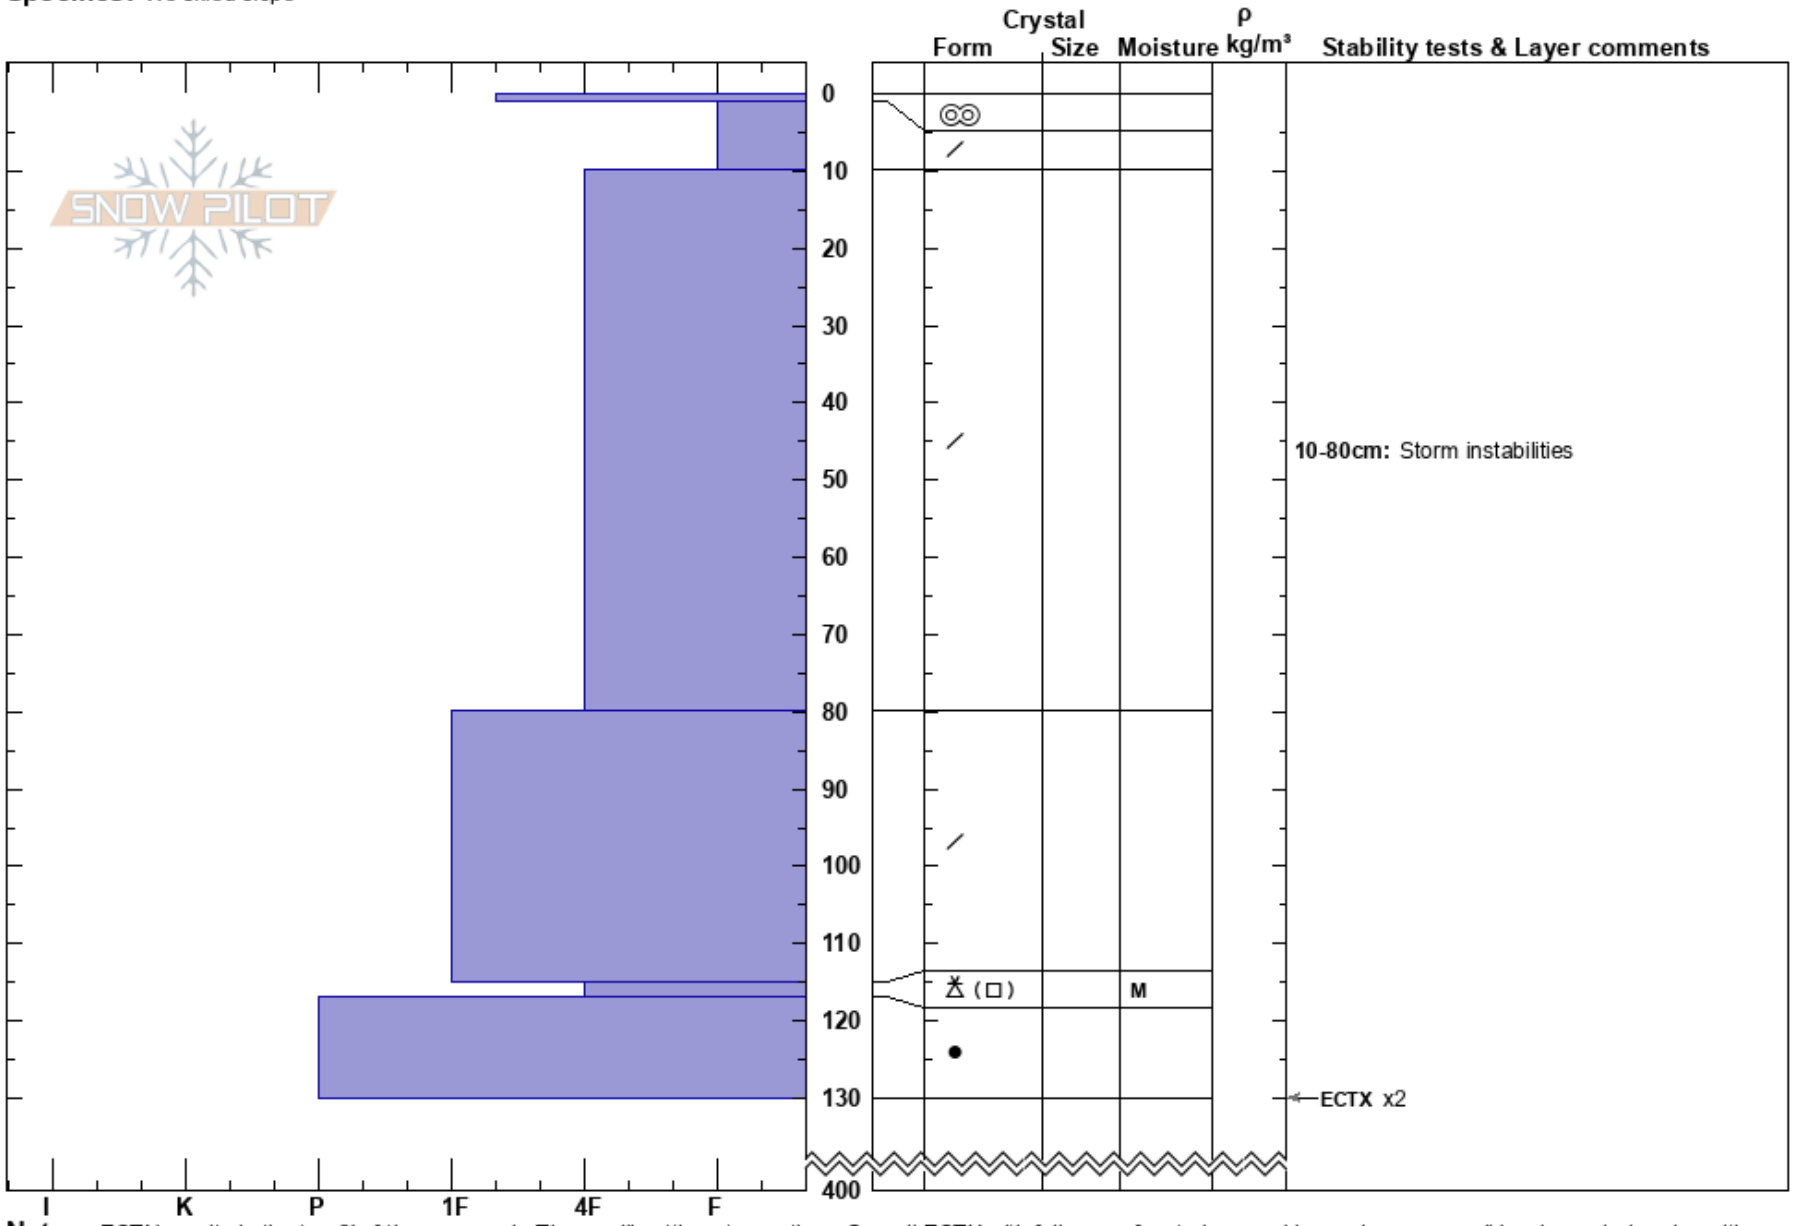
03/28/2023 - 10:30am
Co-ord: 40.56914N, -111.59883W
Slope Angle: 28°
Wind Loading:

Stability: Good
Air Temperature: -8°C
Sky Cover: CLR
Precipitation: NO
Wind: Calm

HS:400

Layer Notes:
10-80cm: Storm instabilities
10-80cm: Problematic layer



Notes: ECTN results in the top 2' of the snowpack. These will settle out over time. Overall ECTX with failure on faceted graupel layer above a pencil hard rounded grains with propagation x2 after ECTX with a hard shovel pry. I would be surprised if this layer was the culprit in further avalanches.
