mid east Mt. Republic Absaroka Range

MΤ

Elevation: 9300 ft Aspect: 110° Specifics: We skied slope

Wind Loading:

01/15/2018 - 2:00pm Co-ord: 45.00539N, -109.94403E

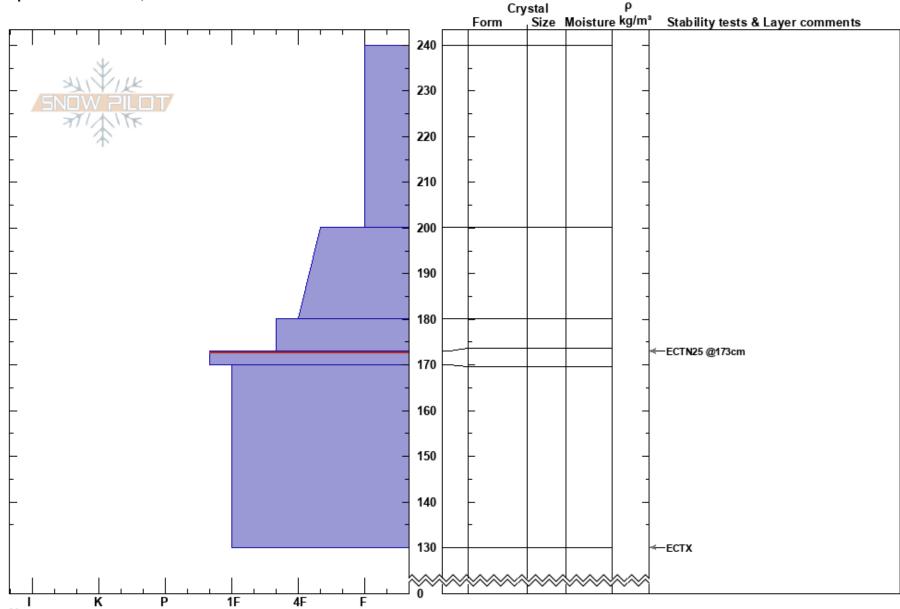

Slope Angle: 24°

Beau Fredlund

Stability: HS:240 Layer Notes: Air Temperature: 173-170cm: Problematic layer

Sky Cover: CLR

Precipitation: NO Wind: Calm

Notes: Sort of ridiculous how little that snow has settled.! Did note though, that the ridgeline just above the pit location was dramatically wind affected (from west winds), which probably had something to do with the XL natural avalanche on the nearby Fin. (Also checked my notes from Jan. 4th, which reported widespread surface hoar in this area. Could be the culprit).
