

Nakiska Platter  
Kananaskis  
AB

Elevation: 2405 m  
Aspect: NE

Specifics: Pit dug in a Ski Area

Zach Boshart  
19/11/2023 - 12:30  
Co-ord: 11U 627116W 5645246N  
Slope Angle: 40°  
Wind Loading: previous

Stability: HS: 170  
Air Temperature: -0.3°C PF: 20 75-76cm: Problematic layer  
Sky Cover: BKN  
Precipitation: NO  
Wind: SE Light Breeze

**Notes:** While the MFcr is our main layer of concern due to its destructive potential and widespread distribution, its sensitivity is stubborn. The wind slab that makes up the top 10cm of the snowpack is confined to specific terrain, however it is touchy, and is also being identified as a layer to monitor, specifically in larger terrain features where entrainment is possible.
