

Stability: Fair **HS:** 150 **Layer Notes:**
Air Temperature: -7°C **PF:** 40 75-80cm: Problematic layer
Sky Cover: SCT **PS:** 25
Precipitation: NO
Wind: Calm

Notes: Cut through the crust (40 cm down) and produced ECPT12 down 75cm. In a separate test, we stopped the cut at the crust and did not get results below the crust. While the crust can support a skier's weight in places, it is not a guarantee and it is safer to assume that an avalanche could be triggered below the crust.
