

Whistler Bowl  
 Whistler  
 BC  
 Elevation: 2130 m  
 Aspect: 15°  
 Specifics: Pit dug in a Ski Area

JN Bertrand  
 12/12/2023 - 09:50  
 Co-ord:  
 Slope Angle: 32°  
 Wind Loading:

Stability:  
 Air Temperature:  
 Sky Cover: FEW  
 Precipitation: NO  
 Wind: Calm

HS: 47  
 PF: 15  
 PS: 5  
 Layer Notes:  
 0-2cm: rimed surface particles  
 26-27cm: Problematic layer  
 27-47cm: glacial ice interface FC

**Notes:** Snowpack interface/bond to glacial ice. Test pit directly below large top of bowl crevasse.  
 Compression tests both failing on Fc under crust. HS near top of glacial ice consistently 40-80cm, increasing in depth lower down due to debris.
