

Stability: Good	HS: 128	Layer Notes:
Air Temperature:		35-30cm: brown from dust
Sky Cover:		
Precipitation:		
Wind:		

Notes: Obvious layers of weak facets. I did a cross slope PST when my ECT did not break at all. It was a steep slope, so this does not work as well as it would on a flatter slope or doing a proper PST....but it did propagate across and I suspect a regular PST would have propagated to the end after a 30-40 cm cut. Just speculation though.
