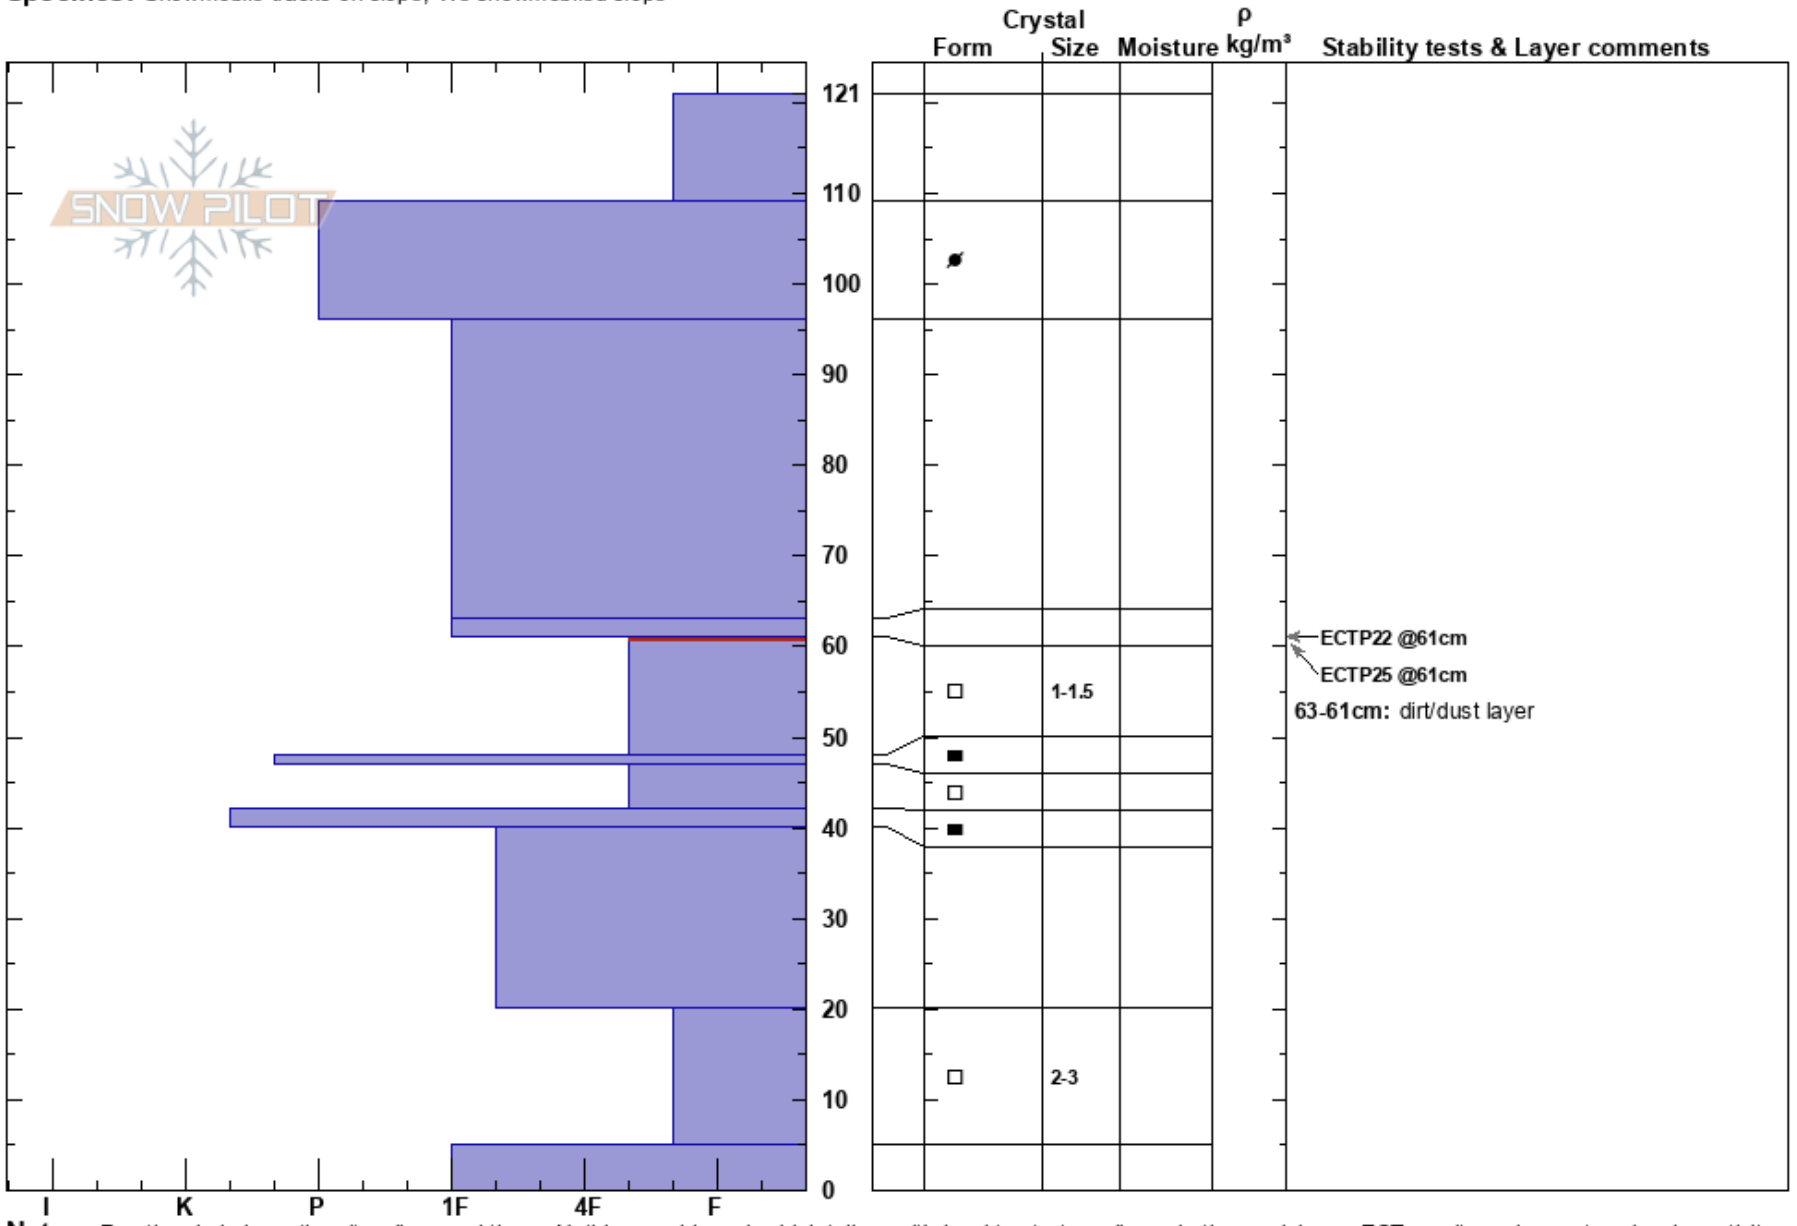
HS: 121

Layer Notes:
63-61cm: dirt/dust layer
61-48cm: Problematic layer

Specifics: Snowmobile tracks on slope; We snowmobiled slope



Notes: Ran the sled above the pit wall several times. Nothing would crack which tells me it's hard to start a collapse in the weak layer. ECT results and recent avalanche activity tells me it's possible and when it does, the facets under the dust will propagate a crack really far.
