

HS:300 **Layer Notes:**
260-257cm: Problematic layer

Notes: Overall, very little wind effect with the new snow. However, on SW Meridian, we were able to ski cut some 15 cm deep soft slabs, over a harder m/f crust, which were more sensitive/ running short distances.

Also, some small wet loose activity was noted on the steep solar aspects around 2pm, with greenhouse warming and calm winds.
